ADDENDUM 01

ADDENDUM NO. 01

July 24, 2026

**Bradford Exempted Village Schools
New Athletic Facility
760 Railroad Avenue
Bradford, OH 45308**

LPA PROJECT NO. 263401.00

TO ALL BIDDERS:

This addendum including all items listed hereinafter, shall become a part of the documents, shall be taken into account in preparing the Proposal, and shall become a part of the Contract. The work under each branch shall be in accordance with the original specifications unless excepted in this Addendum.

This addendum consists of 36 pages and 24 revised drawings.

1 ITEM NO. 1: PREBID REQUESTS FOR INFORMATION.

1.1 Question: Is this project prevailing wage?

1.1.1 Response: No.

1.2 Question: Is this project tax exempt?

1.2.1 Response: Yes.

1.3 Question: Details 6 and 11 on sheet A503 show a break metal cover at the top of the wall. Where does this go?

1.3.1 Response: The 6x6 break metal cover is installed in the visitor and home locker rooms and restrooms at the top of the CMU wall to cover the gap between the top of the wall and the metal deck. It should be installed in these areas where there is no ceiling. The break metal should be white. This should also be installed in Vestibule 107.

1.4 Question: Is the sitework by others? In the spec manual it states that Div 31 and 33 are "NA".

1.4.1 Response: All sitework including but not limited to the excavation, utilities and grading are included in this project. Divisions 31 and 33 are not included in the specification manual as all required information is on the civil drawings for those divisions.

1.5 Question: I am not seeing any eave heights listed for the multiple building elevations as well as a noted roof pitch. Scaling the drawings I am coming up with a 27'-0" eave height for the main gymnasium building with a peak of 40'-9" giving us a 4 5/16" roof pitch. For the West lean-to structure, I am scaling a 19'-9 1/2" eave height on the high side at the Gymnasium structure and a 10'-9 1/2" eave height at the low side giving us a 4" roof pitch. For the South lean-to canopy structure, I am scaling a 17'-1 1/2" eave height at the high side at the Gymnasium structure and a 13'-2 1/2" eave height at the low side giving us a 4" roof pitch. Please verify the elevations.

1.5.1 Response: The eave height of 27'-0" at the main roof is acceptable. The eave height of the roof at the west side of the building is approximately 19'-9 1/2" on the high side and approximately 10'-10" on the low side. For the front entry canopy on the south side of the building the eave heights of 17'-1 1/2" and 13'-2 1/2" are acceptable. Please note these dimensions are not absolute and may vary a few inches depending on the requirements of the pre-engineered building manufacturer. The roof slope of all roof areas is 4:12. The peak height is not an absolute and can be adjusted to accommodate the roof pitch but is approximately 40'-9". Please also note that there is a metal panel soffit with support framing at the front canopy ceiling that is 10'-0" above the finished floor elevation.

1.6 Question: On sheet A121, what is the ceiling on the front entrance canopy?

1.6.1 Response: The ceiling for the front entrance canopy is a metal panel soffit similar to Berridge L-Panel with an embossed stucco texture and vee grooves. This will be installed on 6" metal studs at 24" on center with 1-1/2" hat channel furring at 24" on center. See attached detail 26 on sheet A503 for the section / detail.

1.7 Question: Are the storm downspouts surface drained or tied into the storm sewer?

1.7.1 Response: All downspouts at the building are tied into a perimeter drain system. See attached revised sheet C3 for the perimeter drain and connection to the storm sewer.

1.8 Question: On sheet E1.1 in the top right corner of the gym there is an exit fixture type 'X1', that fixture is not on the fixture schedule. Please clarify.

1.8.1 Response: See the attached revised sheet E1.1 clarifying the fixture type.

1.9 On sheet E1.1 on the mezz detail there is a fixture type 'EMS', that fixture is not on the fixture schedule. Please clarify.

1.9.1 Response: See the attached revised sheet E1.1 clarifying the fixture type.

1.10 Are dirt spoils able to be left onsite?

1.10.1 Response: Yes. Spoils may be left on the Owner's property and per their direction.

1.11 Is the owner paying for any third party testing fees?

1.11.1 Response: Yes. The owner is hiring a third-party testing agency for special inspections.

1.12 Is the owner paying for the building permit?

1.12.1 Response: Yes. The owner is paying for the general building and zoning permits.

1.13 Can you identify what the owner is providing and installing?

1.13.1 Response:

1.13.1.1 The owner will provide electric hand dryers, one drinking fountain, paper towel dispensers, soap dispensers and toilet tissue dispensers. These items shall be installed by the contractor as part of this project.

1.13.1.2 The basketball backboard, rim and padding will be provided by the owner. These items shall be installed by the contractor. Please note that the superstructure and motorized and mechanical components of the forward folding backstops shall be provided and installed by the contractor as part of this project.

1.13.1.3 Card readers, video call stations and data receptacles are being provided and installed by the owner's technology contractor. Cabling for the technology devices is also being provided and installed by the owner's technology contractor. Rough-ins only shall be provided by the contractor as part of this project.

1.14 Spec section 03 30 00 - Page 5 Section 2.11D calls for 3lbs of synthetic micro-fiber per cubic yard. Do we need to include this in the mix or is the W2.0x2.0 wire mesh specified on the structural drawings sufficient?

1.14.1 Response: The synthetic micro-fiber is not required since we have wire mesh.

- 1.15 Spec section 03 30 00 – Page 5 Section 2.11 does not have a mix design for the 3,500 PSI slab on deck concrete specified on Drawing S0000?

1.15.1 Response: Similar to Interior Slabs on Grade except 3500 PSI strength.

- 1.16 Is it acceptable to install a 4" thick x 2'0" wide continuous footing under the grade beams/foundation walls, so they can be formed & poured in place?

1.16.1 Response: Yes.

- 1.17 Is it acceptable to drop the top of column footing elevation by 1'0" (and raise the piers from 2'4" tall to 3'4" tall) , so the piers & grade beams/foundation walls can be poured at the same time?

1.17.1 Response: Yes.

- 1.18 For Alternate G-7, can you confirm that door 200 is part of the alternate and not the base bid? The narrative only states that the stair is part of the alternate?

1.18.1 Response: Door 200 is in the base bid. The stair only is alternate G-7.

- 1.19 The wall sections and keynotes reference 5/8" plywood installed on the exterior walls of the building. Being a Pre-Engineered metal building, is this correct? What is the purpose of this sheathing? Also, where you list out the wall assembly R-Values, you state 3/4" plywood, which contradicts the 5/8" plywood as noted most everywhere else on the plans. Please advise.

1.19.1 Response: 5/8" plywood should be provided and installed. The metal panel siding is technically a rainscreen and requires a solid substrate with a drainage plain, in this case, Tyvek or equal building wrap.

- 1.20 Is the card reader for door 101 included in the base bid?

1.20.1 Response: The card reader rough-ins for door 101 shall be included in the base bid.

- 1.21 Does the joist and deck holding up the mezzanine have to go through the PEMB supplier? This appears to be supported by masonry and isn't tied to the PEMB. S101 call this out to be by the PEMB provider.

1.21.1 Response: No. The joists and metal decking may be supplied separately from the PEMB manufacturer. Please note that the design of the joists and decking is a delegated design. The joists must not be deeper than 18". Boxouts for the return ductwork penetrating the mezzanine floor must be included in the design.
